

ECP - ECONOMIC PROBLEMS AND POLICY

ECP 3530 Economics of Health and Healthcare Policy

Credit Hours: 3

This introductory course will provide the student with a basic overview of healthcare markets using methods of economic analysis. The course will examine healthcare markets from demand and supply side perspectives, as well as examining public policy issues pertaining to the delivery of healthcare services. Additional topics include competitive vs. non-competitive markets, health insurance markets, pharmaceutical markets, the overall healthcare labor market, and a comparative analysis of healthcare systems in the United States and internationally.

ECP 3703 Managerial Economics

Credit Hours: 3

Prerequisites: Departmental approval or admission to Bachelor's program required

This course integrates applied microeconomic theory with practical quantitative and qualitative applications that managers must use when considering important decisions for the business enterprise.
